

Creating PostScript files from MAC FrameMaker

You will first need to download the **"Prinergy Refiner.ppd"** available thru your sales / customer service representative. Uncompress the file and place into your OS 9 System Folder / Extension Folder / Printer Description Folder. Use the following screen captures as your guide to creating a PostScript file prior to Distilling with Acrobat.

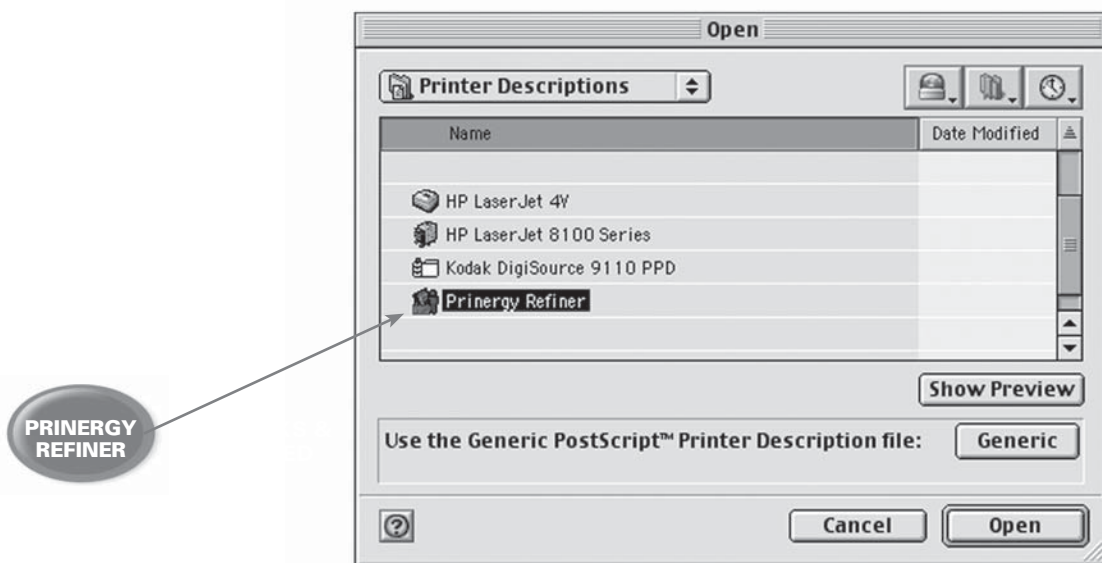

1. Go to your **Chooser**, and select **Laserwriter 8**. Under *Select a PostScript Printer*, choose **Acrobat Distiller** as your Printer then select the **Setup...** button.

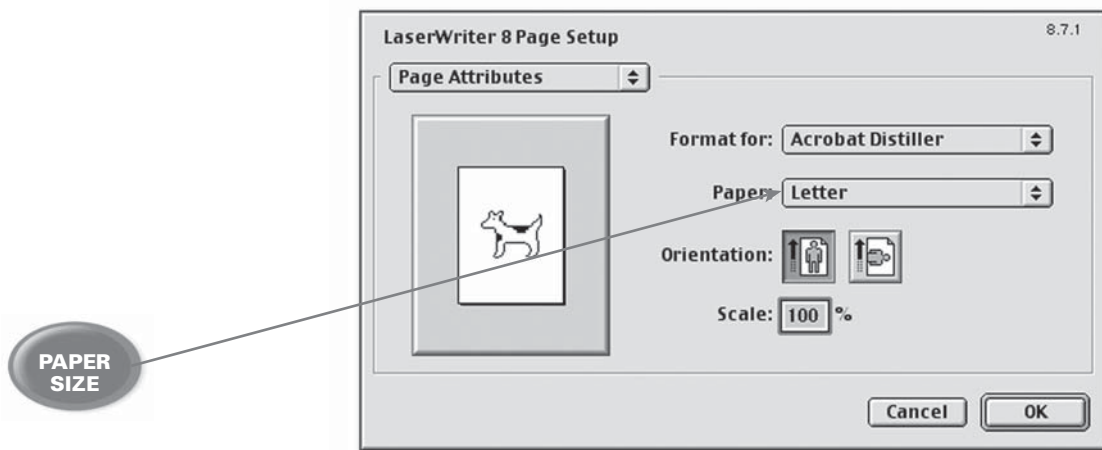

2. Select the **Select PPD...** button to continue.

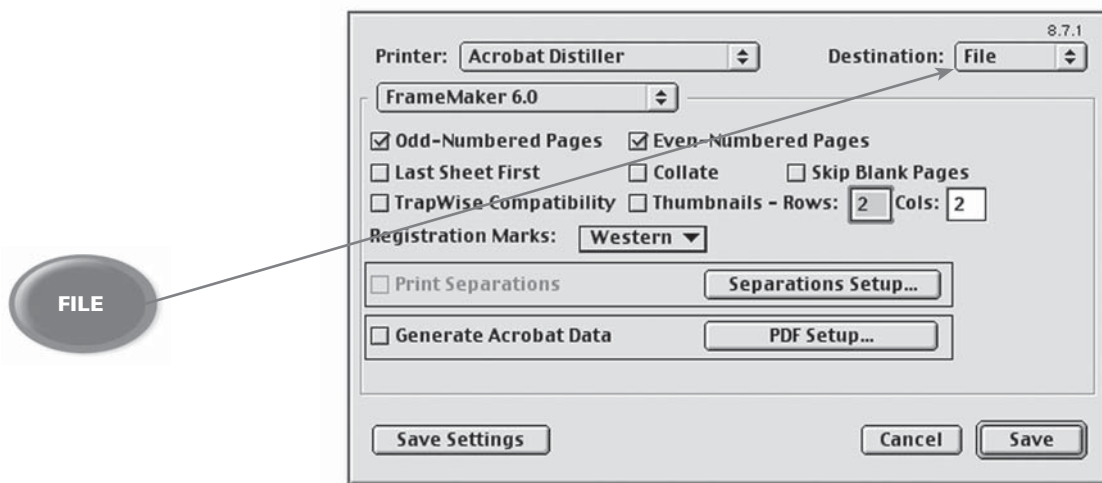

3. Go to your OS 9 System folder / Extensions folder / Printer Descriptions folder and choose **Prinergy Refiner** from the list. Select the **Open** button to continue.

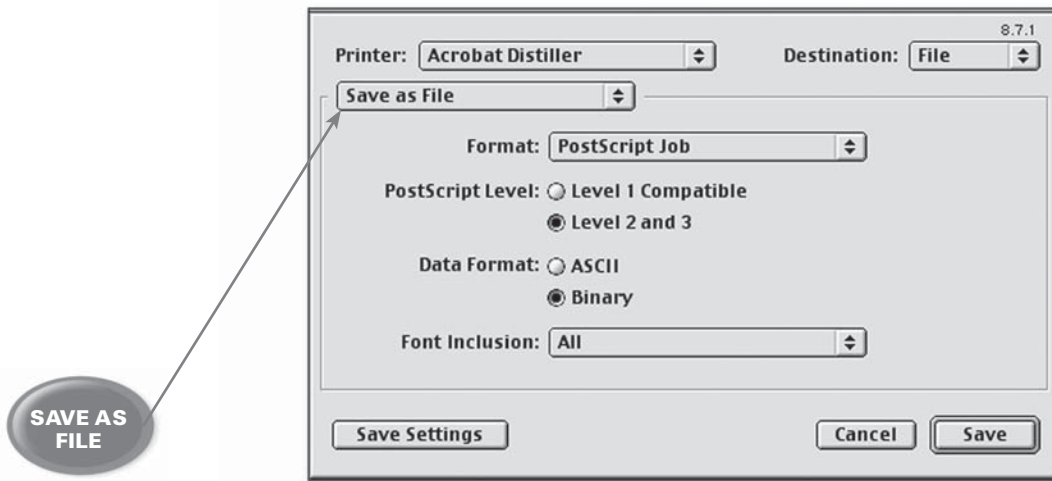

4. Within your FrameMaker document, select **Page Setup** from the file menu. Under Paper Size, choose either **Letter** or **Tabloid** depending upon actual size of document. A minimum of 1" larger than your actual document size is preferred. Match the other settings as shown.

5. Select the **OK** button to continue.
6. Select **Print** from the pull down menu. Choose **File** as a destination, matching all other settings as shown below.

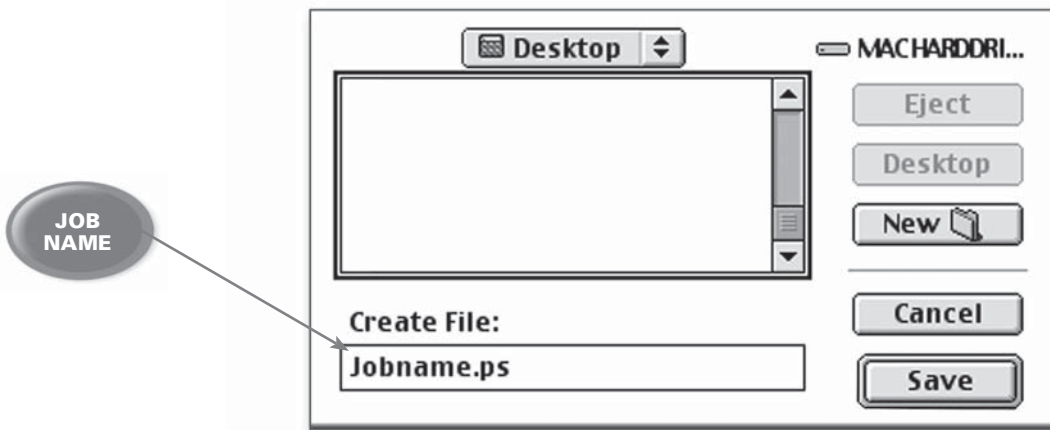

7. Select **Save as File** from the drop down menu. Match the settings as shown below.

8. Select the **Save** button to continue.

9. Name your file with the “.ps” file extension. Avoid using spaces, special characters, forward slashes or hyphens.

10. Select the **Save** button to save your PostScript file.

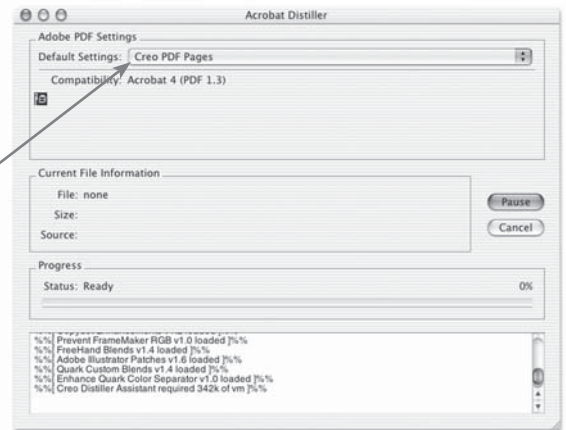

Distilling PDF files from PostScript files

Copy the file **"CreoDistillerAssistant"** into your Adobe Acrobat folder / Distiller folder / Startup folder. **Note:** Delete any file named "Example.ps" from the Startup Folder. This file can interfere with the proper operation of the Creo Distiller Assistant.

Copy the file **"Creo PDF Pages.joboptions"** into your Adobe Acrobat folder / Distiller folder / Settings folder.

Restart Acrobat Distiller. **Note:** This software is compatible with Adobe Acrobat 4.0 (or newer) for Macintosh.

1. Drag and drop the PostScript file onto the Acrobat Distiller window with **"Creo PDF Pages"** selected under the Adobe PDF/ Default Settings drop down window.

2. After the file has been distilled, you should have a PDF file with the same name in the same location as your PostScript file.

3. Please take a moment to open and view the file. The file should include **trim marks**, **bleeds**, all **images** and **fonts**, and look as you intended.

If you have any further questions or concerns, please feel free to contact your customer service or sales representative at 503-588-9339.
